INDEPENDENT RESPONSIBLE AI PRACTICE

Maximize AI ROI. Minimize its Risks

identifiable gives organizations an independent view of where AI creates value, where risks remain and how well it aligns with business priorities.

One clear path forward.

AI that performs for the business, and that your organization can trust, scale and stand behind.

01 · VALUE

More AI value

Connect AI activity to business priorities and expected results.

02 · RISK

Lower risk

See where assumptions, practices and systems could undermine performance, accountability and reputation.

03 · TRUST

Stronger trust

Give leaders and their teams the knowledge and tools they need to use AI responsibly.

04 · SCALE

Scalable practice

Turn isolated uses into a consistent, responsible organizational capability.

Four situations you may recognize.

AI strategy and consulting

Buying, developing, using or implementing AI systems? Evaluate and validate business alignment, AI strategy, expected value, conformity and risks before making investment decisions and giving in on hardened habits.

Independent recognition for organizations and professionals

Whether you are an organization or a professional, show your Responsible AI Practice stamp. Own a Responsible AI Practice assessment against credible, evidence-based standards and get lifetime access to our proprietary tools and methodologies.

Responsible AI practice, governance and risk management

AI constellations, AI pilots, different platforms, shadow AI, AI costs and results that do not meet expectations. Build one responsible AI practice based on international standards such as the NIST AI RMF, ISO/IEC 42001 and 42005, Québec's Law 25, the EU AI Act and other standards by industry.

Scale on solid foundations

Trust AI control mechanisms, not the model. Your choice is innovation and conformity. Maximize your AI ROI, strengthen the practice, address the gaps and put innovation and competitiveness to scale without compromising the reputation, the performance and the capability of your AI.

Three offers carry the work.

Responsible AI Practice

The designation program. An independent evaluation of responsible AI practice; the designation is awarded when the evidence meets the standard.

identifiable Move 38

The cabinet's editorial program: one responsible AI frame decoded each week, giving leaders the language and the judgment the practice requires.

Consulting

AI strategy, AI systems evaluation, AI governance and AI risk management, aligned with the business priorities and measurable value.

THE CONVICTION THAT ORGANIZES OUR WORK

Governance is foundational.
Risk management is a must.
Responsible AI is a practice.

This is how we make AI your next best growth element.

The work we deliver.

01	Evaluation of AI systems and agents	System inventory, evidence scoring, iDIA profiles, assessment of agent autonomy and supervision.
02	Consulting and AI strategy	Business alignment, roadmap, prioritization and secure integration strategy.
03	Corporate training and skill transfer	AI literacy, masterclasses, applied workshops and capability transfer to your teams.
04	Responsible AI designation program	The iDIA evaluation pathway, completion attestation and threshold-based designation.
05	AI governance and AI risk management	Policies, roles, registers, ISO/IEC 42001 preparation, NIST AI RMF, Law 25 and EU AI Act alignment.

The organizations that trusted the practice.

THE METHOD

iDIA Framework & iD AI Index: the proprietary methodologies to control and secure AI in your company.

The observable, measurable verdict your organization can act on.

HOW DO WE MAKE AI SAFER?

Mapped	An inventory locates each system, its data and its dependencies.
Evaluated	Systems are assessed before deployment and re-assessed as they change.
Governed	Policies, roles and registers exist, and someone keeps them current.
Managed	Incidents, bias and changes follow a defined, owned process.
Applied	The rules shape daily work, in the way teams use AI.

THE VERDICT, IN FIVE QUALITIES

Sovereign	You know where models and data live, and under which jurisdiction.
Transparent	AI use is disclosed, and its decisions can be explained to the people they affect.
Measurable	Performance, risk and progress are read in numbers, on one index.
Accountable	A named person answers for each AI-assisted decision.
Mature	The practice improves on a set cadence, along a maturity scale.

Grounded in the frameworks your stakeholders already recognize.

MANAGEMENT

ISO/IEC 42001

We prepare organizations for the AI management system standard. Certification itself is issued by accredited external bodies.

RISK

NIST AI RMF

The risk management framework that structures how AI risks are identified, measured and governed.

REGULATION · EU

EU AI Act

Obligations by risk class for providers and deployers, with phased application already underway.

REGULATION · QUÉBEC

Law 25

Québec's privacy regime, including transparency duties around automated decisions.

The frame runs on working tools.

MODULE 01

Inventory & lifecycle

Register your AI systems and trace each change.

MODULE 02

Risks, incidents & bias

Assess each system, manage incidents and track bias.

MODULE 03

Compliance & policies

Law 25, the AI Act, NIST and ISO/IEC 42001, tracked as one.

MODULE 04

Transparency & operations

Registers, monitoring and data, ready for the audit.

Where a partnership creates value.

Advisory firms, professional associations, insurers and technology providers bring us in when their clients need an independent view of AI practice.

ROUTE 01

Referral and orientation

Your clients get an independent evaluation and one recommended first step. You keep the relationship and the context.

ROUTE 02

Co-delivery

Evaluation, training or governance work delivered inside your engagements, under a shared and explicit scope.

ROUTE 03

Independent recognition

The designation program as a complement to your advisory or audit work: an evidence-based signal your clients can carry to their own stakeholders.

One safeguard governs each route: evaluation outcomes are not for sale. The designation is earned on evidence or it is not awarded, whoever made the introduction.

Organizations we join forces with.

OPEN FOR THE NEXT
PARTNERSHIP

Founded in Montréal, practicing across the globe.

Three partners founded identifiable. Six professionals have since joined as designated Responsible AI Practitioners, bringing cybersecurity, design thinking, AI implementation, ESG advisory, data security and business strategy into every engagement.
